

# ICNNA Test Coverage Ledger

Cross-cutting thread T.11

Felipe Orihuela-Espina

v1.0 — 7 July 2026

## Document Log:

- 7-Jul-2026: FOE/Claude — Document created (v1.0). Seeded with the full class inventory at v1.4.2 (intermediate increment). Two classes at *complete*: `identifiableObject`, `condition`. All others at *none*.

## Purpose

This document is the **test-coverage ledger** for ICNNA (cross-cutting thread T.11, adopted at v1.4.2). It enumerates every ICNNA class against its unit-test status and is updated at each sub-release.

The ledger provides *visibility*: a single place to see what is covered and what is not. Coverage is enforced by two exit criteria:

- **v1.8.0** (oo/ removal sweep): no oo/-derived class may be deleted while its modern replacement carries status *none*.
- **v2.0.0** (release): zero classes at status *none*.

The governing principle is P2: every class modernised from v1.4.2 onwards ships with tests. The ledger extends this guarantee to classes not yet scheduled for a modernisation sub-release.

## Status Legend

|                 |                                                                                                   |
|-----------------|---------------------------------------------------------------------------------------------------|
| <i>none</i>     | No unit-test file exists for this class.                                                          |
| <i>partial</i>  | A test file exists but coverage is incomplete (some properties, methods, or edge cases untested). |
| <i>complete</i> | The test file covers all properties, key methods, and critical edge cases.                        |

## 1 Modern classes (+icnna/)

Classes residing in the +icnna package tree. These are the primary tracking targets; all must reach *complete* by v2.0.0.

### 1.1 +icnna.data.core

| Class              | Test file                | Status          | Notes            |
|--------------------|--------------------------|-----------------|------------------|
| identifiableObject | testIdentifiableObject.m | <i>complete</i> | 6 tests; v1.4.2  |
| condition          | testCondition.m          | <i>complete</i> | 21 tests; v1.4.2 |
| experimentBundle   | —                        | <i>none</i>     |                  |
| experimentalGroup  | —                        | <i>none</i>     |                  |
| experimentalUnit   | —                        | <i>none</i>     |                  |
| lightDetector      | —                        | <i>none</i>     |                  |
| lightSource        | —                        | <i>none</i>     |                  |
| metaEntry          | —                        | <i>none</i>     |                  |
| montage            | —                        | <i>none</i>     |                  |
| nirsMontage        | —                        | <i>none</i>     |                  |
| opticalCoefficient | —                        | <i>none</i>     |                  |
| optode             | —                        | <i>none</i>     |                  |
| qc                 | —                        | <i>none</i>     |                  |
| qcCriterion        | —                        | <i>none</i>     |                  |
| rawData            | —                        | <i>none</i>     |                  |
| referenceLocation  | —                        | <i>none</i>     |                  |
| signalDescriptor   | —                        | <i>none</i>     |                  |
| signalSet          | —                        | <i>none</i>     |                  |
| subject            | —                        | <i>none</i>     |                  |
| timeline           | —                        | <i>none</i>     |                  |

## 1.2 +icnna.data.snirf

| Class        | Test file | Status      | Notes |
|--------------|-----------|-------------|-------|
| auxBlock     | —         | <i>none</i> |       |
| dataBlock    | —         | <i>none</i> |       |
| measurement  | —         | <i>none</i> |       |
| metaDataTags | —         | <i>none</i> |       |
| nirsDataset  | —         | <i>none</i> |       |
| probe        | —         | <i>none</i> |       |
| snirf        | —         | <i>none</i> |       |
| stim         | —         | <i>none</i> |       |

## 1.3 +icnna.data.misc

| Class        | Test file | Status      | Notes |
|--------------|-----------|-------------|-------|
| rawData_NIRx | —         | <i>none</i> |       |

## 2 Legacy classes (oo/)

Classes still residing in oo/ awaiting modernisation into +icnna/. These will receive tests when their Arc B/C modernisation sub-release is delivered. They must not be deleted at v1.8.0 while carrying *none* (exit criterion above).

| Class                   | Status      | Planned modernisation        |
|-------------------------|-------------|------------------------------|
| signal                  | <i>none</i> | v1.4.4                       |
| structuredData          | <i>none</i> | v1.4.4                       |
| neuroimage              | <i>none</i> | v1.4.4                       |
| nirs_neuroimage         | <i>none</i> | v1.4.4                       |
| dataSource              | <i>none</i> | v1.4.5                       |
| dataSourceDefinition    | <i>none</i> | v1.4.5                       |
| session                 | <i>none</i> | v1.4.6                       |
| sessionDefinition       | <i>none</i> | v1.4.6                       |
| experiment              | <i>none</i> | v1.4.7b                      |
| experimentSpace         | <i>none</i> | v1.5.5                       |
| analysis                | <i>none</i> | v1.5.5                       |
| integrityStatus         | <i>none</i> | v1.5.5                       |
| ecg                     | <i>none</i> | v1.5.5                       |
| rawData_ETG4000         | <i>none</i> | v1.5.0                       |
| rawData_NIRScout        | <i>none</i> | v1.5.0                       |
| rawData_ShimadzuLabnirs | <i>none</i> | v1.5.0                       |
| rawData_UCLWireless     | <i>none</i> | v1.5.0                       |
| rawData_LSL             | <i>none</i> | v1.5.0                       |
| rawData_BioHarnessECG   | <i>none</i> | v1.5.0                       |
| rawData_Snirf           | <i>none</i> | v1.4.5 (retire) <sup>a</sup> |
| channelLocationMap      | <i>none</i> | v1.5.1                       |
| roi                     | <i>none</i> | v1.5.1                       |
| cluster                 | <i>none</i> | unscheduled <sup>b</sup>     |
| menaGrid                | <i>none</i> | unscheduled <sup>b</sup>     |
| logarithmicRadialGrid   | <i>none</i> | unscheduled <sup>b</sup>     |
| imagePartition          | <i>none</i> | unscheduled <sup>b</sup>     |

<sup>a</sup> `rawData_Snirf` is a legacy wrapper superseded by the `+icnna.data.snirf` package. It will be retired (not modernised) at v1.4.5 and requires no modern replacement of its own.

<sup>b</sup> These four classes implement manifold-embedding analysis (`cluster`, `menaGrid`, `logarithmicRadialGrid`, `imagePartition`). Their modernisation will be scheduled once the manifold-embedding sub-release is scoped; they cannot be reasonably sequenced before that design decision is made.
